

Warm Edge Dry Air Enclosure

Moisture-controlled storage designed for high-volume Warm Edge production.

Engineered for Standard and Auto Warm Edge rolls, this enclosure maintains a dry internal environment using an integrated desiccant system, preventing material degradation and ensuring consistent performance on automated IG lines.

Why This Enclosure Matters

- Perspex viewing panels and secure lockable compartments
- Heavy-duty castor wheels for easy factory mobility
- Integrated dry air desiccant system removing internal moisture
- Durable modular aluminium construction for long service life
- Fully bespoke sizes and configurations to match your layout

Built for Superspacer & Thermoflex Users

Manufacturers running high volumes of Superspacer and Thermoflex Warm Edge products require reliable storage close to automated IG lines. By controlling humidity within the enclosure, materials remain in optimal condition prior to use, reducing waste and improving production consistency.
